

## Digital Forensic Examination

### Ransomware Attack? We've Got You Covered

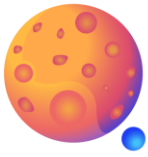

Facing a ransomware attack can be a devastating experience. Our team of world-renowned security experts is here to help you understand the situation, make informed decisions, and recover your business.

### Our Approach to Forensic Investigations

- Evidence Collection:** We meticulously gather digital evidence from your systems and networks, including hard drives, servers, network devices, and cloud-based resources. This process requires specialized tools and techniques to ensure that evidence is collected and preserved forensically sound.
- Preservation:** Once evidence is collected, we isolate and secure it to prevent further damage or tampering. We create an exact copy of the evidence and store it in a secure, tamper-proof environment.
- Analysis:** Our experts use advanced forensic tools and techniques to analyze the evidence and identify the attacker's methods, point of entry, and scope of the attack. We examine network traffic logs, system logs, and application logs to identify suspicious activity.
- Reconstruction:** We use the evidence to recreate the incident and identify the root cause, mapping out the attacker's actions, understanding how they gained access to your systems, and determining the extent of the damage.
- Presentation:** We present our findings clearly and concisely, providing the necessary information for legal proceedings or insurance claims. Our reports are designed to be easily understood by non-technical audiences while providing detailed technical information for experts.

### How Quantum PKI Can Help

- **Expert Guidance:** Our team has high-level experience in digital forensic examinations and can provide strategic advice and support throughout the process.
- **Comprehensive Support:** We offer end-to-end assistance, from initial assessment to long-term remediation. Our services include incident response, forensic investigation, data recovery, and security consulting.
- **Strategic Partnerships:** We collaborate with our partners, who are leading experts in the field. This allows us to leverage the expertise of our partners to provide the best possible solutions for our clients.
- **Peace of Mind:** Let's handle the complexities of digital forensics so you can focus on your business. We are committed to providing you with the support and guidance you need to recover.
